Climate Change: How do we Know?

In this real-life CSI film our guiding scientist, Kendrick Taylor, is charming enough to give Gil Grissom a run for his role! This riveting and entertaining twenty minute film opens the door to the ways the scientific community determines that human activity is changing climate. It follows the science in a logical progression from field studies in Antarctica, to computing centers in Nevada where climate predictions are made. It's the facts about climate change you've needed to know but didn't know who to ask.

A Place to Land

There is a little known crisis of unwanted pet parrots in the US today that is reaching epic proportions. A Place to Land shows why this is the case and how foster homes in Northern Virginia and remote sanctuaries in Arizona and Utah are coping with it.

Homegrown Revolution

In the midst of a densely urban setting in downtown Pasadena, radical change is taking root. For over twenty years, the Dervaes family have transformed their home into an urban homestead. They harvest nearly 3 tons of organic food from their 1/10 acre garden while incorporating many back-to-basics practices, as well as solar energy and biodiesel.

Nutkin's Last Stand

The English love their native red squirrels. The red squirrel was immortalized by children's author Beatrix Potter in the character of Squirrel Nutkin and is a ubiquitous figure in English arts, literature and lore. But all is not well for the red squirrel...

Perchance to Dream

After forty years of captivity, 'Perchance To Dream' offers a new perspective in the life of Miami Sea Aquarium's star performer, Lolita the Killer Whale. Brutally taken from her family and home waters in Puget Sound, Washington and flown across the country to live in Miami, Florida, Lolita is expected to perform daily to an enthusiastic crowd; a crowd completely ignorant to the plight of her gentle spirit.

The Garden

The Garden has the pulse of verité with the narrative pull of fiction, telling the story of the country's largest urban farm, backroom deals, land developers, green politics, money, poverty, power, and racial discord. The film explores and exposes the fault lines in American society and raises crucial and challenging questions about liberty, equality, and justice for the poorest and most vulnerable among us.

Rainbow Raider

Filmmakers, Barry McKnight and Roger Cowland, made Rainbow Raider about a wild rainbow lorikeet parrot that came to their backyard in Sydney, Australia.
